

**Potato Varieties (left to right)**

Kennebec, Goldrush Russet, French Fingerling, Adirondack Red, Carola, Red Pontiac, Adirondack Blue, Yukon Gold, Dark Red Norland

Variety	Description	Delivery Options																					
<b>Adirondack Blue</b>	A dark blue skin and blue streaked to solid blue flesh. Impressive yields of large potatoes, sizes almost like Kennebec.	<b>Farm Pickup</b> Pickup at the farm for the lowest prices. This keeps your seed in ideal storage conditions until you are ready for them! We recommend you come to the farm. Last pickup day is April 24th. We shut down the potato storage control systems at this point, please note, seed quality will decline.																					
<b>Adirondack Red</b>	A red skin and streaked to solid red flesh. We are impressed with its aggressive growth habit and yield. This is a full size potato, similar to Carola in yield and size out. Both Adirondack varieties were developed at Cornell.	<b>Northern Illinois Pickup Site</b> This site is located at the Green Earth Institute in Naperville, IL; a Chicago western suburb. See their website for directions to the farm, <a href="http://www.greeneearthinstitute.org">www.greeneearthinstitute.org</a> <ul style="list-style-type: none"> <li>• Delivery is in late March, weather dependent.</li> <li>• You agree to arrive at the site for pickup at the designated time and day.</li> </ul>																					
<b>Carola</b>	This is our favorite yellow flesh/yellow skin variety. Plant Carola at wider spacing (10-12 inches), narrow spacing gives all small size potatoes. A moist flavorful potato without some of the production problems of Yukon Gold.	<b>Mailed Orders</b> You pay a handling charge plus postage. Packages are sent COD so you pay at delivery. The risk of freezing during transport has to pass before we will mail the packages.																					
<b>Dark Red Norland</b>	The organic grower's choice for the early red. Excellent flavor. Red skin and white flesh. Produces both boiler and baker size spuds. A very versatile potato which exhibits good resistance to potato viruses. Narrow in-row spacing (4-6 inches) will produce high yields of B size potatoes.	<b>Order Priority</b> All orders postmarked by January 15th, will be treated equally. This way, if our supply runs out for a variety, we will contact you about a partially reduced order or change to another variety.																					
<b>French Fingerling</b>	Very attractive pink skin/yellow flesh variety. Extra-high value in the market place. We plant at 12 inch spacing and get high yields of good sized fingerlings, even a few baker sized. Aggressive plant growth smothers those late weeds. Very resistant to leafhopper feeding. We like this variety for yield, taste and growth characteristics. Our CSA members rave about its flavor.	For orders postmarked by January 15th, we will also offer a deferred payment option as follows: ½ payment with the order, and the other ½ payment included with the order but the check postdated to March 1. This way you can defer the impact on your cash flow, but we know what is sold and paid for. The postdated check must accompany the order to reserve the potato seed.  All orders postmarked after January 15th, will be strictly first-come first-served with full payment at the time of the order.																					
<b>Goldrush Russet</b> (not available)	The June rains forced us to locate our Goldrush Russet field in a less desirable spot; which resulted in them not passing certification. We will have them available again next year.	<b>Seed Spacing Notes</b> In general, potatoes respond to narrow spacing (4 to 6 inches) by producing more, smaller potatoes. Some varieties respond better than others to high density planting. Yukon Gold and Dark Red Norland do well in denser plantings. Experiment for yourself. <table border="1" data-bbox="1263 1644 1568 1980"> <thead> <tr> <th colspan="3">Approximate Seed Needed (assumes ounces/seed piece)</th> </tr> <tr> <th>In-Row Spacing</th> <th>Seed Per 100 Row Ft</th> <th>Feet of Row per 50 lbs of Seed</th> </tr> </thead> <tbody> <tr> <td>4 inch</td> <td>38 lbs</td> <td>133 ft.</td> </tr> <tr> <td>6 inch</td> <td>25 lbs</td> <td>200 ft.</td> </tr> <tr> <td>9 inch</td> <td>17 lbs</td> <td>300 ft.</td> </tr> <tr> <td>12 inch</td> <td>13 lbs</td> <td>400 ft.</td> </tr> <tr> <td>15 inch</td> <td>10 lbs</td> <td>500 ft.</td> </tr> </tbody> </table>	Approximate Seed Needed (assumes ounces/seed piece)			In-Row Spacing	Seed Per 100 Row Ft	Feet of Row per 50 lbs of Seed	4 inch	38 lbs	133 ft.	6 inch	25 lbs	200 ft.	9 inch	17 lbs	300 ft.	12 inch	13 lbs	400 ft.	15 inch	10 lbs	500 ft.

In-Row Spacing	Seed Per 100 Row Ft	Feet of Row per 50 lbs of Seed																					
4 inch	38 lbs	133 ft.																					
6 inch	25 lbs	200 ft.																					
9 inch	17 lbs	300 ft.																					
12 inch	13 lbs	400 ft.																					
15 inch	10 lbs	500 ft.																					
<b>Kennebec</b>	A great baker sized potato. White flesh and skin. Capable of high yields and large spuds. Excellent flavor. Hill it well to keep the big spuds from sticking out of the hill.																						
<b>Red Pontiac</b>	A red that sizes up to large potatoes with deep eyes. It matures later than Dark Red Norland and can yield better; holds well in storage.																						
<b>Yukon Gold</b>	Yellow flesh/yellow skin potato. Stores well. We plant at 6 inches for the highest yields and still get large tubers. A caution with this variety; excessive rapid growth with the Yukon Gold results in hollow heart. If you have had hollow heart problems, increase planting density (4-6 inches), or decrease fertility, and always maintain uniform water levels.
